

WS 10 Wax Solvent

Applications:

WS 10 is a powerful blend of aromatic and aliphatic solvents. It is a cost effective solvent designed for the removal of low melting point waxes in wellbores, pipelines and other closed surface facilities.

Typically, WS 10 is batched into a well and allowed to circulate for 14 – 48 hours.

Properties:

Appearance Clear hydrocarbon liquid
Solubility Water insoluble
Specific Gravity 0.78
Flash Point 18 °C (TCC)
Pour Point..... < -40 °C

Advantages:

- Economical.
- Helps break emulsions.
- Leaves formation in a natural wet state.

Disadvantages:

- Flammable solvent requiring appropriate fire protection.
- Does not work well on high melting point waxes or asphaltenes.

Handling Precautions:

- Avoid contact with skin; if exposed, wash affected area with soap and water for 15 minutes.
- In case of eye contact, rinse with water for 15 minutes and seek medical attention.
- Wear gloves and eye protection when handling.
- Keep away from all ignition sources.
- Refer to Material Safety Data Sheet for detailed information.
